Energy Management Policy

Telehouse recognises that its business activities consume energy from various sources within its control and has identified its areas of significant energy use as follows:

- Cooling and air-conditioning
- Machines, Plant and Equipment, including generators, transformers and UPS (Uninterrupted Power Supplies)
- Lighting

To a lesser extent ICT equipment (servers, routers, computing equipment), Heating and Transportation

Telehouse recognises that it has a responsibility to reduce its energy use and continually improve the energy efficiency of its operations. Telehouse is committed to:

- Continual improvement of its energy performance.
- Ensuring the availability of information and of necessary resources to achieve any objectives and targets established.
- Complying with all relevant legal, customer, and other third party requirements.
- Set targets in the form of EnPI's (Energy Performance Indicators) in the form of overall electricity consumption, overall energy consumption, achieving PUE (Power Usage Effectiveness) figures for specific buildings and to achieve other specified local energy targets in the United Kingdom and France.

Telehouse will achieve these commitments through the following means:

- The implementation and maintenance of an Energy Management System that is independently certified as compliant with ISO 50001:2011.
- Identifying all significant areas of energy use (SAEU) which are any facility, equipment, system, process and/or personnel group working for, or on behalf of Telehouse.
- Setting targets and objectives for reducing its energy use and maintaining an energy efficiency improvement programme to enable them to be achieved.
- Making energy efficiency a key consideration when designing, purchasing and/or implementing new facilities, processes, services and equipment.
- Training its employees in good energy management practices and encouraging employee involvement in energy efficiency improvement initiatives.
- Recording information on its energy performance and making this information available on request to customers, regulators and other interested parties
- Continually monitoring and reviewing its energy use against targets and objectives.

The implementation of this Energy Policy is fundamental to the success of Telehouse's business and must be supported by all employees as an integral part of their daily work.

This policy is reviewed and issued at least annually and when significant changes occur to the organisation.

Signed
Ken Sakai 
Managing Director
