

# Telehouse Enhanced Connect for Microsoft Office 365

Location: Coriander Avenue, London, E14 2AA, United Kingdom

## Telehouse Enhanced Connect for Microsoft Office 365

Microsoft Office 365 Applications Run 5X Faster on Telehouse Enhanced Connect

### Optimising Microsoft Office 365 Performance

Microsoft Office 365 uses the cloud to deliver enterprise-level productivity solutions to businesses of all sizes, enabling them to grow their customer base and drive new revenue. Companies that have a cloud presence within Microsoft Office 365, or locations of its predecessor Microsoft Business Productivity Online Services (BPOS), typically suffer from sub-optimised connectivity between their corporate sites and the cloud. Telehouse Enhanced Connect enhances access for remote sites and business users to

Microsoft Office 365 and BPOS. Without this intelligent network in the cloud, enterprises will experience sluggish performance while connecting from global locations to a cloud service like Microsoft Office 365.

With Telehouse Enhanced Connect, business users gain faster access to Microsoft applications such as Exchange Online, SharePoint Online, Microsoft Office Professional Plus and Microsoft Lync Online. Telehouse Enhanced Connect's cloud-based Wide Area Network (WAN) Optimisation as-a-Service addresses bandwidth constraints through TCP optimisation, compression, de-duplication,

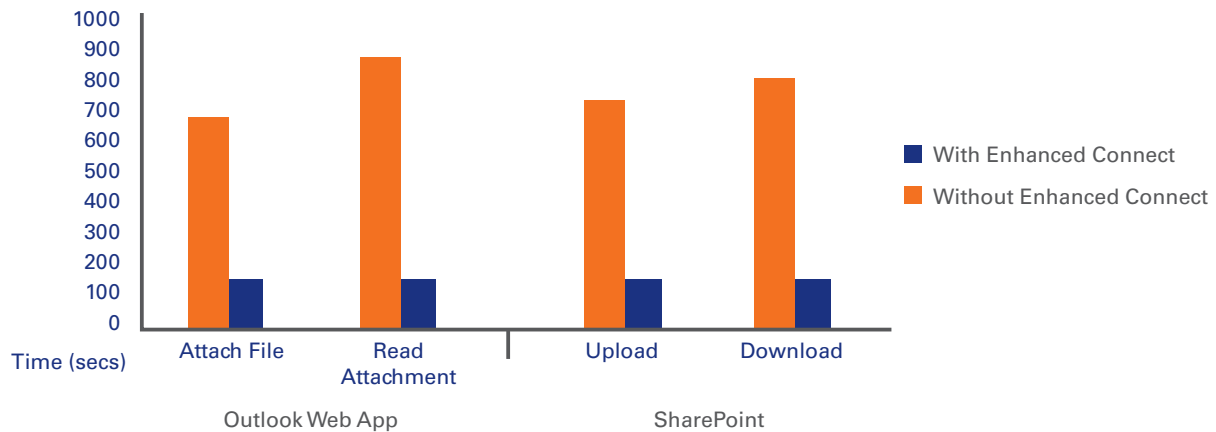

and the combined effects of latency and protocol inefficiencies. As a result, globally distributed teams can communicate and collaborate with the security, reliability and control required by the enterprise.

### Test Results

WITH Enhanced Connect	TIME
5X faster	154 seconds
WITHOUT sub-optimised	TIME
slow and unproductive	886 seconds

## Microsoft Office 365 Application Performance

30Mb file over a 2 Mbps WAN link

Telehouse Enhanced Connect's WAN optimisation as-a-Service minimises latency variations and maximises the use of available bandwidth for faster and efficient application response time. A 30Mb file download that took 886 seconds with 1% packet loss via the Internet was consistently completed in 154 seconds for a 60% response time improvement and with zero retries.

### Key Benefits

- 60% application response time improvement
- Application runs 5X faster
- Increased productivity

1. Telehouse RealTime Performance Portal ensures visible and quantifiable quality and speed performance. SLA's are met through real time network data and analysis.

- Real-time visibility and control of network and application performance
- Telehouse RealTime Performance Portal ensures visible and quantifiable quality and speed performance SLA's met

2. By joining the Telehouse community, customers benefit from being in the most connected data centre in Europe.

- through real time network data and analysis
- By joining the Telehouse community, customers benefit from being in the most connected data centre in Europe.
